Application for IT Site Administrator (m/w/d)

Dear Hiring Team,

Motivation

Howmet's focus on precision manufacturing and the critical infrastructure that supports it is exactly the kind of environment where reliable IT administration makes a real difference. The IT Site Administrator role covers a broad technical scope – server administration, network management, virtualization, user support, and compliance – which matches my background across both Windows and Linux environments.

Experience

At Ericsson, I managed VMware ESXi 6/7 and vCenter infrastructure at the Jazz data center in Lahore, handling VM provisioning, RAID configuration, Active Directory integration, and HPE iLO remote access. I administered Windows and Linux servers across production environments, managed user access and IAM policies, and wrote Ansible playbooks for automated system configuration. At Hello App, I administered 50+ servers across multiple cloud platforms handling SSL, DNS, network configuration, firewall rules, patch management, and end-user support. I have hands-on experience with virtualization (VMware, Hyper-V), network technologies (VLANs, switching, firewalls), Active Directory, and Office 365 administration. I am comfortable with both Level 1 and Level 2 support, ticket-based workflows, and working with external service providers.

Fit

I am available full-time and open to relocating to Hildesheim. My English is C1 and my German is B1, improving actively. I work independently, document clearly, and take end-to-end ownership of systems. I hold a Certified Kubernetes Administrator (CKA) and Linux Foundation Certified Sysadmin (LFCS) certification and have extensive experience maintaining infrastructure in compliance-aware environments. I would welcome the chance to bring this background to the Howmet Hildesheim team.

Sincerely,

Khaleel Ahmad
