Hiring Team

May 11, 2026

Deutsche Kreditbank AG, Berlin

Application – DevOps Engineer (m/f/d)

Dear Hiring Team,

Why DKB

DKB's technology-first culture inside a regulated financial environment is what draws me to this role specifically. Building cloud infrastructure that banking services and analytical workloads depend on is an engineering challenge with real stakes, and DKB's AWS-heavy, GitOps-driven stack is one I have operated in production. The Data and Analytics focus in this role is particularly compelling because I have experience on both sides: running the infrastructure that analytical pipelines run on, and building the pipelines themselves.

What I Bring

At Ericsson I spent three years building and operating cloud infrastructure for systems serving 74M+ telecom subscribers under strict availability and security requirements. I wrote Terraform modules that cut environment provisioning from two days to 20 minutes, set up GitOps delivery with ArgoCD and Flux across dev and production environments, and built Prometheus and Grafana observability stacks that reduced incident detection time by 50%. I also managed analytical data pipelines processing 12,000+ files daily on top of the same infrastructure as production services – a pattern directly relevant to what DKB describes. I hold a Certified Kubernetes Administrator certification and have hands-on production experience with Helm, Kustomize, Crossplane, and CI/CD pipeline design.

Fit

I am based in Berlin, available full-time, and happy to work on-site regularly with product teams. I am enrolled in an M.S. in Artificial Intelligence at BTU Cottbus-Senftenberg part-time, which does not affect my availability for this role. My English is C1 and my German is B1, improving actively.

Sincerely,

Khaleel Ahmad
