

Khaleel Ahmad

Python Developer · AI/ML Engineer

Berlin, Germany

+49 155 63611714 | khaleel.eu@gmail.com | khaleel-git | khaleel-ahmad

Profile

Python developer with 3+ years of experience in data processing, automation, and machine learning workflows. Currently pursuing M.S. in Artificial Intelligence at BTU Cottbus-Senftenberg with coursework in computer vision, image analysis, and ML. Strong programming skills in Python and C/C++, with hands-on experience building data pipelines, classification systems, and analytical tooling.

Education

BTU Cottbus-Senftenberg

M.S. in Artificial Intelligence, Specialization in AI/ML and Distributed Systems

Germany

2025 – Present

Information Technology University (ITU)

B.S. in Electrical Engineering, Specialization in Computer Science

Pakistan

2016 – 2021

Experience

Ericsson

Data Engineer

Lahore, Pakistan

Aug 2022 – Feb 2025

- Built Python pipelines to process and classify 12,000+ structured data files daily using multiprocessing and automated validation workflows.
- Developed image and data visualization tools using Python for operational dashboards and analytical reporting.
- Designed classification and comparison tools (Delta Scanner, Baseline Comparator) using structured data analysis and Python scripting.
- Optimized SQL workflows and automated data quality checks, reducing processing time by **30%**.

Hello App

Python Developer & Automation Engineer

Remote

Jan 2020 – Jul 2022

- Developed Python automation scripts for data collection, processing, and structured storage across distributed systems.
- Built REST API integrations and monitoring scripts across cloud infrastructure with focus on reliability and uptime.
- Managed infrastructure for 50+ applications across AWS, GCP, and Azure maintaining 99.9% uptime over two years.
- Wrote technical documentation and deployment runbooks for all automated workflows used by the engineering team.

ApkFuel.com

Founder & Developer

Remote

Mar 2018 – Oct 2024

- Built data extraction and classification pipelines using Python (Selenium, BeautifulSoup, Scrapy) processing large-scale metadata.
- Designed structured storage and metadata classification system handling large volumes of application data daily.
- Applied data-driven optimization and analytics to grow the platform to 96K monthly users.
- Implemented automated validation workflows to ensure data quality and consistency throughout the pipeline.

Technical Skills

Programming

Python · C/C++ · SQL · Bash

AI/ML & CV

Computer Vision · Image Analysis · Machine Learning · Classification · NumPy · OpenCV

Data Engineering

Apache Airflow · ETL Pipelines · Data Validation · Pandas · Scikit-learn

Tools

Git · Docker · Linux · Jupyter

Databases

PostgreSQL · MySQL · MSSQL

Languages

English C1 Professional

German B1 (in progress)

Urdu Native
