Application for Werkstudent:in AI Product & Solutions (m/w/d)

Dear Hiring Team,

Motivation

shyftplan sits at an interesting intersection of AI-driven workforce optimization and real operational problems that companies face daily. The Werkstudent AI Product role appeals to me because it combines hands-on building with direct customer impact – translating real requirements into working tools using AI. I am based in Berlin and available for on-site work.

Experience

I am enrolled in the M.S. Artificial Intelligence program at BTU Cottbus-Senftenberg, which gives me direct grounding in the ML and AI concepts relevant to this role. My practical background complements this well: at Ericsson I built Python-based data pipelines and analytical tools that non-technical teams used daily, which required translating operational requirements into working software quickly. At APKFuel I independently built and iterated a full product from idea to 96K monthly users, which is exactly the kind of self-directed, fast-iteration work described here. I am comfortable with AI tooling, prompt engineering, and using modern development tools to prototype and ship solutions quickly. I document my work clearly and iterate based on feedback.

Fit

I am enrolled at BTU, available for the Werkstudent hours, and based in Berlin for on-site work. My English is C1 and my German is B1 – sufficient for daily communication with the team. I work independently, take ownership of tasks end to end, and am used to collaborating across product, engineering, and business teams.

Sincerely,

Khaleel Ahmad
